Frontend-developer

Lead Frontend Developer | Octopos (formerly KDSX)

Developed a high-performance landing page using Astro, achieving near-perfect Lighthouse scores through static site generation and optimized asset delivery, significantly improving overall website performance.

Designed a modular dashboard architecture capable of handling complex, real-time order flows, ensuring low-latency updates between the storefront and the kitchen.

Growth & Scalability

Implemented a comprehensive i18n strategy, localizing the entire platform for multiple regions and allowing for rapid market entry into the Uzbekistan SaaS sector.

Architected a "Product-Led Growth" funnel, including an automated 30-day free trial system and a "One-Button" demo feature to streamline user acquisition and reduce onboarding friction.

Optimized platform SEO and metadata structures, increasing search visibility and brand authority during the transition from KDSX to Octopos.

Technical Excellence

Standardized the frontend tech stack (TypeScript, React, Tailwind CSS), which reduced technical debt and improved developer velocity for future feature deployments.

Resolved critical system bottlenecks and debugged complex state-management issues within the POS system, resulting in a more stable and reliable experience for end-users in high-pressure environments.

Darwin Intelligence

darwinai.ai

IT, System Integration, Internet
• Software Development

Frontend-разработчик

* Contributed to the development of enterprise AI platforms at (darwinai.ai) by improving technical SEO, resolving indexing and crawlability issues, and optimizing semantic HTML to increase search visibility and platform discoverability.

Worked closely with AI-driven systems and backend services to integrate structured AI responses into production-ready user experiences, improving reliability, usability, and overall data presentation across the platform.

Helped bridge the gap between AI infrastructure and user-facing applications by transforming complex AI-generated outputs into clear, interactive, and scalable web interfaces for products such as Real GPT and Real STT.

Further information

About me

Full-Stack Developer with strong frontend expertise focused on building modern, scalable, and high-performance web applications. Experienced in developing intuitive user interfaces while effectively connecting frontend systems with backend services and APIs. Skilled at transforming complex business logic into clean, responsive, and user-friendly experiences.

Worked on POS dashboards, AI-integrated chat systems, and SEO-optimized web platforms using React, TypeScript, Astro, and modern web technologies. Comfortable working across the stack when needed, but strongest in frontend architecture, UI development, performance optimization, and product-focused user experience.
